## **DETAILED ACTION**

### **Information Disclosure Statement**

The information disclosure statement filed 12/22/2006 fails to comply with 37 CFR 1.98(a)(2), which requires a legible copy of each cited foreign patent document; each non-patent literature publication or that portion which caused it to be listed; and all other information or that portion which caused it to be listed. It has been placed in the application file, but the information referred to therein that's crossed out has not been considered. In this instance, a copy of the Kai et al. non-patent literature publication was not provided.

### **EXAMINER'S AMENDMENT**

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Brain Cash on 07/14/2009.

The application has been amended as follows:

Add the following to the beginning of the 1<sup>st</sup> paragraph of the specification:

#### **Cross-reference to Related Applications**

This application is a U.S. national stage entry of the international application PCT/JP05/00090 (published as WO 2005/066657) filed on January 7, 2005, and claims priority to the Japanese application No.

2004-050869, filed February 26, 2004, and U.S. provisional application 60/535,208, filed January 9, 2004.

**Allowable Subject Matter**

Claims 1 – 11, 13 – 26, 28, 32, and 59 – 66 are allowed.

The following is an examiner's statement of reasons for allowance:

With regards to *independent claims 1 and 32*, the prior art on record fails to expressly disclose a particle detector or a method for detecting position of particles, comprising electrodes for detecting position of particles, said electrodes comprising: one or more global position detection electrodes for detecting global position of particles; wherein ***specifically***, the local position within the global position is determined by using the global position detected by said global position detection electrodes the local position detected by said local position detection electrodes, in combination with the rest of the claimed limitations.

Although references such as Giakos (US Patent 6,703,619), Takahashi (US Patent 6,933,506 B2), Takahasi (US Patent 6207958), Friedman et al. (US Patent 7,332,726 B2) and Takahashi et al. (Development of a Multi-grid....Sources; Science Direct; A 513 (2003) 201 - 205) disclose most of the essential parts (particle detector, anodes, and cathodes,) they do not specify using the local position within the global position as claimed, but rather arrangements without a global position electrode. One of ordinary skill in the art would not be motivated to add such an arrangement as claimed to the disclosure of Giakos, Takahasi, Takahasi Friedman and/or Takahashi et al., absent hindsight reasoning. The conventional individual readout methods, such as

Art Unit: 2884

those taught by Giakos, Takahasi, Takahasi, Friedman and Takahashi et al, rely on single charge readout lines per each strip/pad. The global arrangement provides two groups, therefore providing a more desirable signal to noise when compared to the conventional arrangement. As such, claims 1 and 32 provides a nonobviousness improvement over the prior art on record.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
